Project introduction

This project is to build a booking page for a company in Bergen called Holidaze.

The website I am creating is created so that customers easily can find hotel, guestrooms or bed and breakfast in Bergen. They can then create a booking and the admin can take care of that booking. It is also possible for the customers to contact Holidaze.

Project build up (Will also be shown a visual image under the category sitemap)

*Homepage: This is the main page, on this page the user will find a herobanner, a navbar, and images that links to **places**, which is hotel, guestrooms or bed and breakfast.*

Places: This is the page where the customer can see all of the hotel, guestrooms or bed and breakfast that Holidaze have on their page. When clicking on a hotel the customer will be redirected to the details page of that hotel.

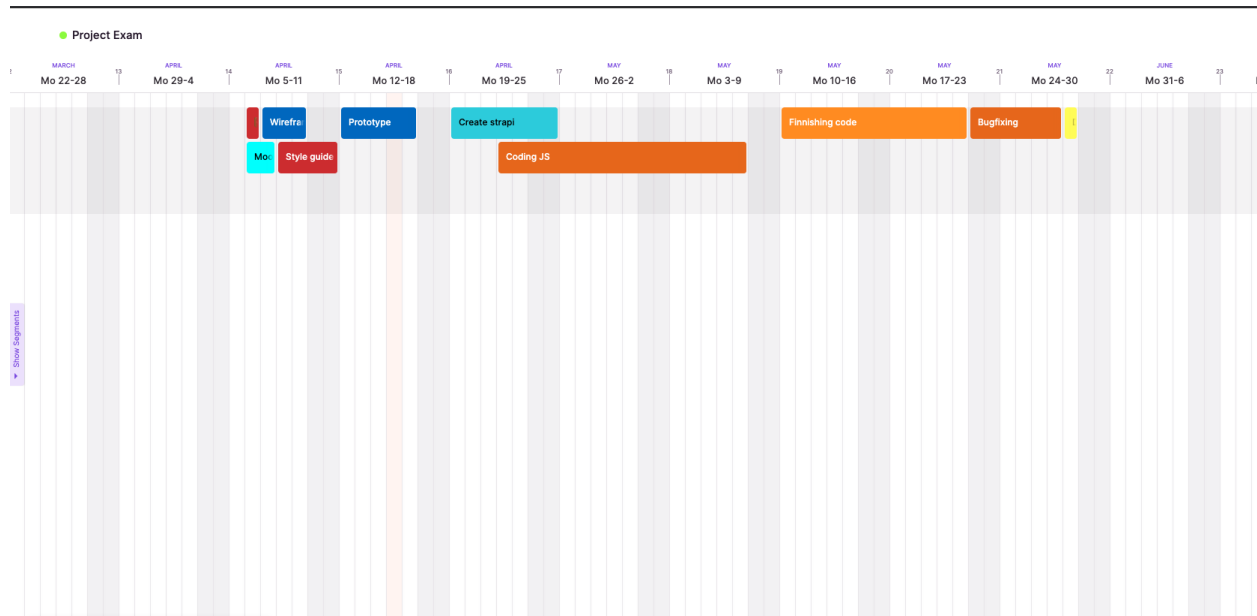

Details page: On the details page, the customer can see images, read information about the hotel and the area. There is also a booking form where the customer can send a booking request to the Holidaze admin.

Contact: On this page the user can fill out a contact form and ask questions, if there are any thing the user is wondering about, this will be sent to the Holidaze admin.

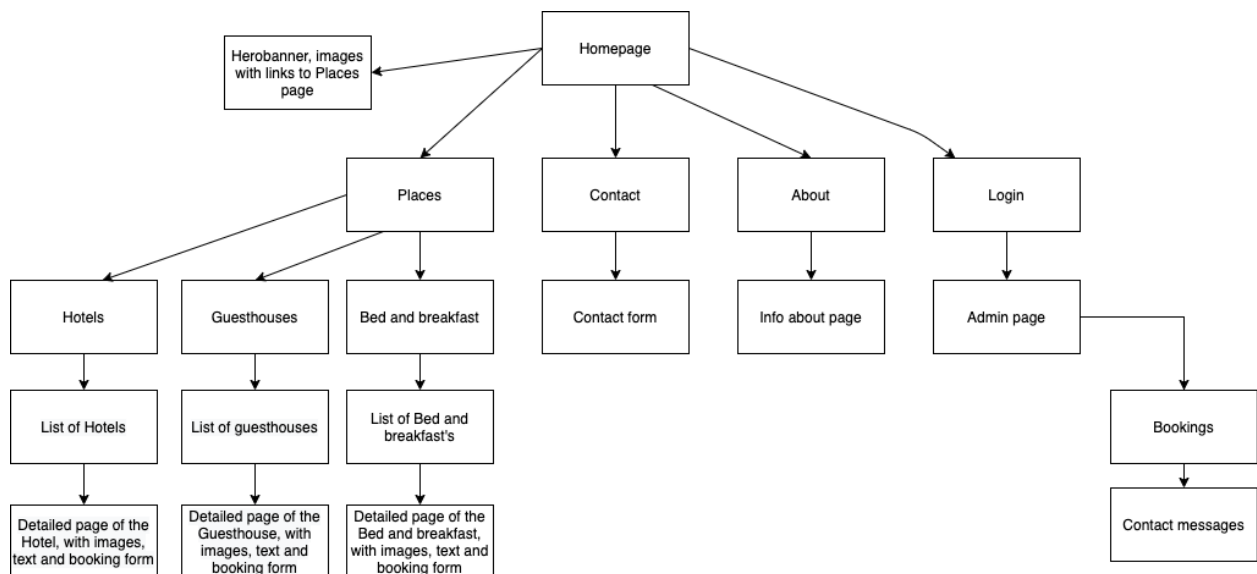

Admin page: On this page admins can read booking requests and messages received from the contact form.

Style guide

See separate pdf.

User Personas

Name: Alan Smith.

Age 45.

Football agent.

Lives in UK.

Alan Smith is a 45 year old football agen who lives with his wife and kids in the UK.

He has always wanted to travel to Bergen.

Alan thinks that he might fall in love with the Norwegian nature and the seven mountains around Bergen.

Goals

- To get easy access to hotels, guesthouse and bed and breakfast's.
- To get book a hotel for his family.
- To get in touch with the hotel to tell that they need baby crib in the room.

Frustration

- Feels that other booking pages, are to big and it is impossible to find what he is looking for.
- Tired of getting spammed with pop-ups about other hotels while reading about one hotel.

User stories

The website:

- The system should let the user be inspired to travel to Bergen
- The system shall have a search-bar
- The system should have colors that are friendly and nice.
- The system must be able to be accessed using both tablet, smartphones and Computers.
- The system must be user-friendly
- The system must have a booking form.
- There must be a contact form.
- There must be a page where the users can see the hotels, guesthouses and bed and breakfasts.
- There must be a page with information about the webpage.

Booking page:

- The system must make a confirmation after booking is sent .
- The system must let user input information such as name, address, number of persons, from date - to date and messages.
- The system must validate that there is text in every field and that the email is correctly written.

Theme:

Holidaze.

Epic:

As a user I want to find a hotel in Bergen.

Features:

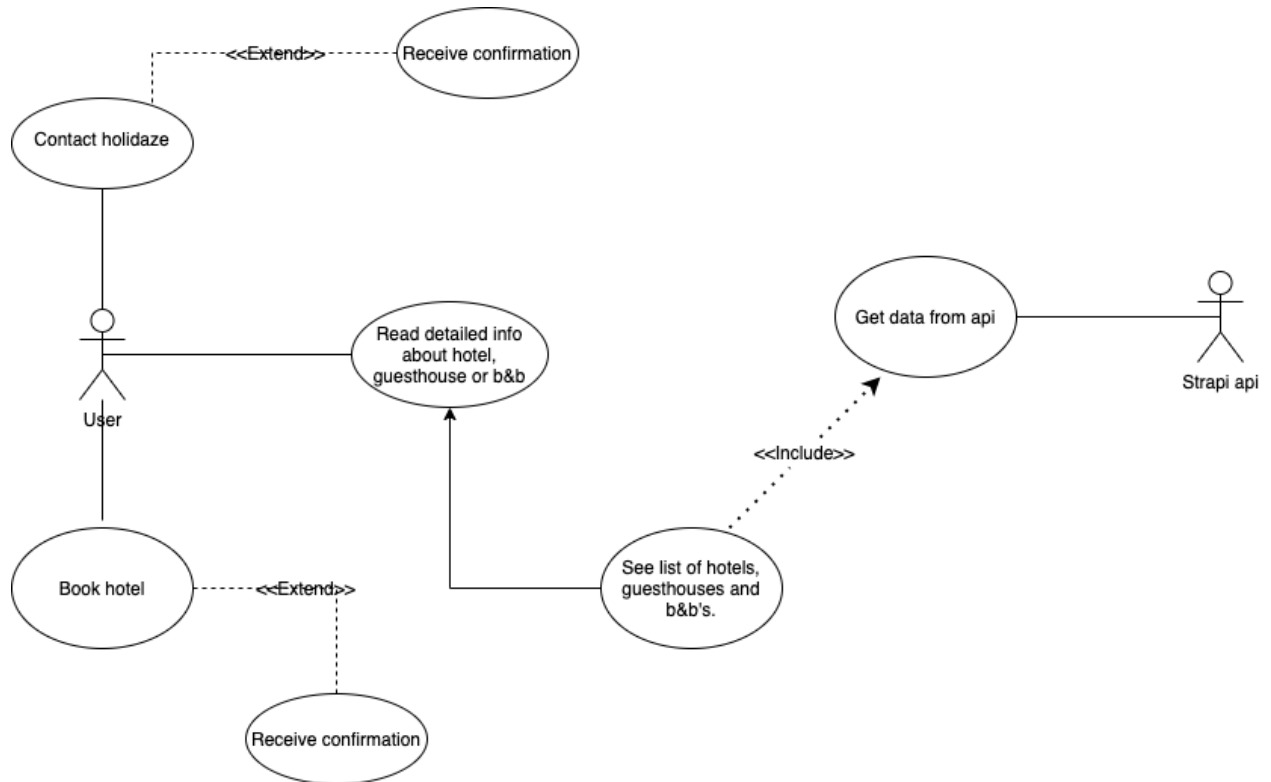

Images
About info
Area info

User story:

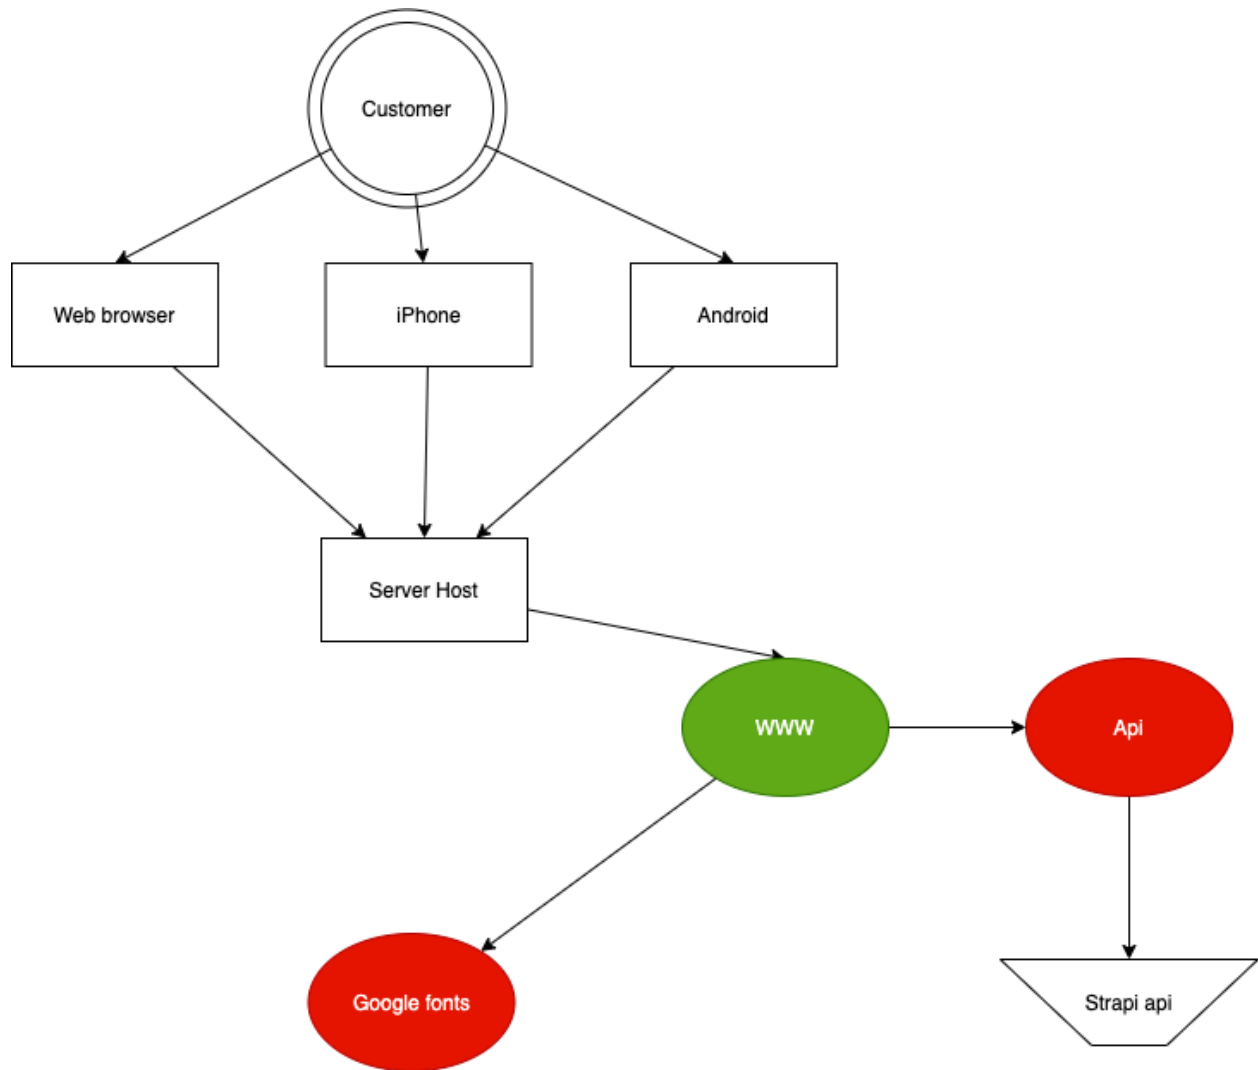

As a user I want to enter the webpage to see if I can find a hotel I want to stay in, in Bergen.

As a user I want to contact Holidaze with questions I have.

Use case

System Architecture Diagram

Summary

WILL COME WHEN ASSIGNMENT IS DONE
